In order to improve clarity, individual items are aggregated in the balance sheet and income statement and presented separately in the notes to the financial statements.

Purchased intangible assets are valued at acquisition cost and depreciated over their estimated useful lives using the straight-line method.

Property, plant and equipment are stated at acquisition or at manufacturing cost based on tax regulations, less accumulated depreciation. The straight-line depreciation method was applied to all items of property, plant and equipment acquired in 2008. Items of property, plant and equipment with a useful life of more than five years acquired prior to 31 December 2007 are depreciated, where permitted under German tax rules, using the reducing balance method and the highest rates permitted for tax purposes. The Company applies straight-line depreciation as soon as this gives rise to a higher depreciation expense. Depreciable assets with an acquisition or manufacturing cost of up to euro 150 are recognised directly as an expense in the year of purchase/construction. Depreciable assets with an acquisition or manufacturing cost of between euro 150 and euro 1,000 are depreciated using the straight-line method over a period of five years. The Company applies all special depreciation permitted under German tax legislation. In addition, a special untaxed reserve pursuant to § 6 b of the German Income Tax Act (EStG) has been recognised.

Factory and office buildings and distribution facilities which form an inseparable part of such buildings are depreciated over 8 to 33 years, residential buildings over 25 to 50 years, technical plant and machinery over 5 to 10 years and other facilities, factory and office equipment mainly over five years. For machinery used in multiple-shift operations, depreciation rates are increased to account for the additional utilisation.

Investments in subsidiaries and participations are stated at cost or, if lower, at their fair value. When the reasons for impairment no longer exist, impairment losses previously recorded are reversed, at a maximum up to the level of original cost. Loans which bear no or a below-market rate of interest are discounted to their present value.

Inventories of raw materials, supplies and goods for resale are stated at the lower of cost and net realisable value. Work in progress and finished goods are stated at direct material and manufacturing cost. Write-downs are made to cover risks arising from slow-moving items or reduced saleability. Leased products are stated at direct material and manufacturing cost plus an appropriate portion of material and production overheads, and depreciated using the highest rates permitted for tax purposes.

Receivables and other assets are stated at the lower of their nominal value or net realisable value.

Investments in marketable securities are measured at cost or, if lower, at their fair value at the balance sheet date.

Provisions for pensions and similar obligations are measured using the projected unit credit method in accordance with IAS 19 (Employee Benefits) applying an interest rate of 6.00 %. The computation is based on the assumptions set out in the biometric tables of Prof. Dr. Klaus Heubeck (2005 G). In addition, future remuneration and pension increases and assumptions relating to fluctuation are also taken into account in the calculation. For reasons of consistency, the provision for long-service awards is measured using the same method. Other provisions are recognised to take account of all identified risks. Provisions are also recognised for deferred expenditure.

Liabilities are stated at their repayment amount at the balance sheet date.

Foreign currency assets and liabilities are translated at exchange rates prevailing on the date of the transaction. Foreign currency balance sheet items are generally hedged; any unhedged losses arising from changes in exchange rates are recognised by restating the foreign currency amount in the balance sheet to the closing rate.

The Company uses derivative financial instruments to hedge currency, interest rate and commodity price risks arising in conjunction with operating activities. Financing requirements resulting from operating activities are also hedged. Where there is a direct hedging relationship, the derivative financial instrument and the hedged item are accounted for as a valuation unit. If there is no hedging relationship, or if the hedging relationship is deemed to be insufficient, provisions are recognised to cover unrealised losses.

Revenues from the sale of vehicles to car rental companies are not recognised when there is an obligation to take back the vehicles. In accordance with the draft financial reporting pronouncement "Specific Issues relating to the Transfer of Beneficial Ownership and Profit Realisation in accordance with HGB" (IDW ERS HFA 13 revised version dated 29 November 2006) issued by the German Institute of Public Accountants (IDW), vehicles remain on the balance sheet, measured at amortised cost, because, on the basis of the criteria set out in the pronouncement, beneficial ownership has not been transferred to the car rental companies.

The nominal amounts of derivative financial instruments correspond to the purchase or sale amounts or to the con-

tracted amounts of hedged items. The fair values shown are measured on the basis of market information available at the end of the reporting period or using appropriate measurement techniques e.g. the discounted cash flow method. We conducted our audit of the financial statements in accordance with § 317 HGB (Handelsgesetzbuch: German Commercial Code) and German generally accepted standards for the audit of financial statements promulgated by the Institut der Wirtschaftsprüfer (Institute of Public Auditors in Germany) (IDW). Those standards require that we plan and perform the audit such that material misstatements affecting the presentation of the net assets, financial position and results of operations in the annual financial statements in accordance with German principles of proper accounting and in the management report are detected with reasonable assurance. Knowledge of the business

activities and the economic and legal environment of the Company and evaluations of possible misstatements are taken into account in the determination of audit procedures. The effectiveness of the accounting-related internal control system relating to the accounting system and the evidence supporting the disclosures in the books and records, the annual financial statements and the management report are examined primarily on a test basis within the framework of the audit. The audit includes assessing the accounting principles used and significant estimates made by the Board of Management, as well as evaluating the overall presentation of the annual financial statements and management report. We believe that our audit provides a reasonable basis for our opinion.

Our audit has not led to any reservations.

In our opinion, based on the findings of our audit, the annual financial statements comply with the legal requirements and give a true and fair view of the net assets, financial position and results of operations of the Company in accordance with German principles of proper accounting. The management report is consistent with the annual financial statements and as a whole provides a suitable view of the Company's position and suitably presents the opportunities and risks of future development."
